

# Work Log - TechOps@Operative

## Alin Ciovica

**Oracle DBA Perspective**

- Import/Export procedures using data pump
- Database duplications
- RMAN backup and recovery
- Oracle client and database upgrades
- PL/SQL, Bash Scripting
- Environment configuration - TNS,Listener
- Creation and Flashback from restore point

**Operations Perspective**

- Amazon AWS Management for EC2 and RDS instances
- Apache Tomcat creating and configuring new environments
- JBoss Webserver implementation
- Software Service Pack preparation and delivery
- SVN management, branch management using Tortoise Client
- Working with Jira ticketing system
- Smoke test preparation

**SysAdmin Perspective**

- Multiple Linux Distros know-how
- Helped IT department to configure Samba Server and Client
- Mounting linux folders to Windows using cifs protocol
- Configured Apache Directory Studio in order to query LDAP Service
- Server performance monitoring
- Administration of Citrix XenApp environments

**Scripting/Automation Perspective**

- I created a PowerShell Script for cold duplication of Oracle Databases hosted on linux machines with mail sending at key steps, fully capable to complete the process from start to finish and also generate logs.
- We managed to improve our response time to work requests and enhanced multitasking.
- Also developed an UI interface using Windows Forms - based on .NET Framework

**Bonus**

- Work from home experience starting from 03.2020 due to Covid-19
